1. Kinkajou

Mammals that live in Central America and South America. They have long prehensile tails to help them grip tree branches.

2. Cicada

Insects that can live underground as nymphs for up to 17 years.

3. Narwhal

A type of whale. They are marine mammals and have long spiral tusks that can reach up to 9 feet long.

4. Mole crab

Types of invertebrates. They have hard outer exoskeletons and live in the swash zone on many beaches.

5. Frilled lizard

Reptiles that are named for the large frill around their necks. They raise their frills to scare away other animals.

6. Mola

They are also called sunfish and are very large and unusual looking creatures. They are the largest bony fish living in the ocean.

7. Kiwi

Small birds that can only be found in New Zealand. They have long, pointy bills and they cannot fly.

8. Fossa

Mammals that live only in the forests of Madagascar. They look like cats but are actually related to mongooses.

9. Tarsier

Mammals that have very large eyes which help them see better in the dark.

10. Kakapo

Birds that are the largest parrots in the world. They are nocturnal and cannot fly.
